	COUNTRY:	EU

## Minuet Watch now available for sale

The Minuet Watch has now passed a general release and is available for sale. The watch incorporates an alarm button enabling the user to raise a call for help via their Tunstall home unit when they require assistance. It is waterproof (brief submergence) and incorporates an LED to provide the user with visual reassurance that the alarm button has been pressed.

The Minuet Watch has been particularly developed to help encourage telecare users to wear their personal triggers throughout the day. It may also support those people who do not want others to be aware that they are wearing a personal trigger e.g. domestic violence victim.

## Features and Benefits

- High quality – Swiss designed watch for ultra reliable operation
- Lightweight – making it comfortable to wear
- Easy to change wearing options – the watch face can be simply swapped between the watch strap and neck cord to suit the user's preferred wearing option
- Alarm button – integrated into the modern design of a watch
- LED indication – informs the user that the alarm button has been pressed and when the battery is low
- Auto low battery – the watch reports to the monitoring centre when the battery is low
- Waterproof – to IP67 standard covering brief submergence in water
- Compatibility – all Tunstall home units operating on the 869MHz frequency

For more information please refer to the Minuet Watch datasheet on the Tunstall website.
